ABOUT ME

Aspiring Data Scientist skilled in Python, machine learning, and data analysis, with hands-on experience in the complete data science lifecycle from data preprocessing to model deployment.

EXPERIENCE

- Jr. Data Scientist**, BCG – Virtual Feb 2025 – Mar 2025
- Directed a customer churn analysis on a dataset of 7,800 users to formulate a strategic framework for actionable insights, identifying factors contributing to a 47% churn rate.
 - Refined a random forest model to forecast customer attrition, achieving a 50% recall rate and improving prediction accuracy over the baseline model by 17%.
 - Distilled complex data into executive summaries and visualizations to guide business recommendations, influencing key decisions.
- ML Engineer**, 1M1B – Virtual May 2025 – Jul 2025
- Engineered and operationalized machine learning models that automated data processing, cutting manual effort by 40%.
 - Constructed a new ML pipeline that enhanced data accuracy by 25% and boosted model performance by 15% through algorithm tuning.
 - Embedded AI solutions into existing systems, yielding a 30% increase in operational productivity.
- Data Engineer**, Infosys Spring Board – Virtual Aug 2025 – Present
- Architecting an end-to-end real estate price prediction platform designed to handle 1000 and more daily listings; finalized the backend infrastructure for model deployment and am now creating a responsive frontend user interface.

EDUCATION

- B.Tech, Artificial Intelligence & Data Science**, SRKR Engineering College 2023-Present
- HSC BIEAP (Physics, Chemistry, & Mathematics)**, Sri Chaitanya College 2021-2023
- SSC BSEAP**, Care E.M High School 2016-2021

PROJECTS

- Car Price Prediction** Accuracy: 94%
- Developed a regression model using a dataset of over [Number] vehicles to predict car prices based on 11 key features.
 - Performed feature selection and model tuning with Scikit-learn, achieving a final Mean Absolute Error of 0.9377.
- Customer Churn Analysis**
- Analyzed behavior from a customer dataset to identify key churn patterns and inform retention strategies.
 - Built and optimized a predictive model (e.g., Logistic Regression) that achieved 89.87% accuracy in identifying at-risk customers.
- AI-Powered TrashQualifier** Accuracy: 98%
- Designed a CNN-based image classification model trained on a dataset of 20,000 images for waste management automation.
 - Achieved 98% classification accuracy using techniques like data augmentation and transfer learning.

SKILLS

Programming Languages: JAVA, Python, R, SQL, C++

Libraries & Frameworks: TensorFlow, Keras, Flask, Scikit-learn, Seaborn, Matplotlib, NLP, Streamlit

Web Databases: NoSQL (MongoDB), React.js, Node.js, MySQL

Tools & Concepts: Data Structures and Algorithms, Docker, GitHub

COURSES

- Programming Essentials in C | Cisco Networking Academy
- DSA with c++ | Newton's school of Engineering
- End-To-End Data Flow | ineuron
